

Our Very Own HHS Senior Wins National Award

By Violet Tanner, Emily Langston, Roxie Wiese

One of our amazing seniors, Codera Krogh recently received the NCWIT Aspirations in Computing national award. This is an organization that aims to promote diversity within STEM.

“I didn’t really have an expectation to get it, I just thought it might be a cool thing to just give it a shot, and see what happens” Krogh commented.

Codera was excited about winning the NCWIT award, and is now waiting for more information for future opportunities.

“The organization that created the award is hosting an awards ceremony at SUU in May!” Codera continues, “Between now and then, I’ll still be receiving information from them about opportunities in STEM and leadership around the country that I can look into.”

She is using HTML to make a business website for her art portfolio and created a video game using Unity software.

Besides coding, Codera is really involved in art, animation, and robotics. She is currently applying to different colleges to pursue animation.

“Animation is cool because there is a lot of art and tech which I do a lot of,” Krogh said.

As she pursues her ambitions for the future, she hopes to raise public awareness through the books and movies she plans to create. She wants to focus on climate issues and other problems that need to be changed.

Codera is excited to see what comes of these opportunities from winning this award and hopes to make a difference.

Here are some of her art samples:
